IBDOCIED: This is a very poor portable x-ray standard and is very outdated and missing many of the technical requirements that are needed for a portable x-ray used in counter IED operations. IBDOCID does not recommend using this standard.

The test object for this standard is not manufactured by anybody and is next to impossible to get. The test object also is very impractical and is designed to force you to use a lab to have the test done. You have to pay for this standard and it cost \$87.00 Euros.
